(54) Title: A FLUID PRESSURIZATION DEVICE

(57) **Abstract:** A fluid pressurization device 10 comprises a pressure container 12 and a first bladder 14, a second bladder 16 and a sheet 18, that are located in the pressure container 12. The bladders 14 and 16 have pipe connectors 32 and 40, respectively, for filling/discharging fluid from the bladders. The bladders 14 and 16 are located in the container 12 adjacent one another, with the bladder 16 being folded in concertina fashion and the sheet 18 being wrapped around the bladder 16 to form a roll surrounding the folded bladder 16. In use, the bladder 14 is filled with a combustible fluid such as oxygen and the bladder 16 is filled with compressed air to a relatively higher pressure than the oxygen in the bladder 14 for pressurizing the oxygen contained therein. As oxygen is delivered from bladder 14, the sheet 18 unravels gradually, allowing the bladder 16 to continue to exert a force on the bladder 14.
